

Uploading Files to a Git Repository

1. Go to github.com and create an account
2. Create a new repository
3. Note the link to the repository. It is usually [https://github.com/\[username\]/\[filename\].git](https://github.com/[username]/[filename].git)
4. Open command prompt

SETTING THE SOURCE TO UPLOAD FROM

5. Navigate to the folder on your home pc where all your files are stored using **cd [filepath]**
6. Initialise this as your git folder using **git init**
7. Check status of the folder using **git status** will show all the source files not yet committed
8. Assign files to your git folder using **git add [filename]** OR you can assign all files using **git add .**
9. Commit the files using **git commit -m "[any project name]"**
9. Recheck status of folder using **git status**

SETTING THE DESTINATION TO UPLOAD TO

10. **git branch -M main**
11. **git remote add origin [https://github.com/craig3737/\[repository name\].git](https://github.com/craig3737/[repository name].git)**
12. **git push -u origin main**
